PROFESSIONAL EXPERIENCE

Benevity

Senior Software Developer

August 2025 - Present

Toronto, ON, Canada

- Leveraging AIDLC methodology and AI tools to migrate a legacy .NET Framework application to .NET 10 on the backend, Vue.js on the frontend, and the use of tools like New Relic, Terraform, CI/CD scripts, AWS, to ensure optimal performance, scalability and reliability, with a projection to splitting the application into a microservice in the future.
- Working cross-functionally with the DevOps team to implement scalable and secured CI/CD pipelines with AWS, and Terraform which so far has seen a 30% improvement in security of secrets and backend services.
- Participating in on-call rotation to resolve production bugs and incident-related issues.

Assumption Vie

Software Developer

July 2025 - May 2026

Moncton, NB, Canada

- Spearheaded the design and implementation of a comprehensive service using C# and .NET Core 8 for a third-party insurance agent, successfully delivering the project within the first month of onboarding.
- Transformed legacy projects from VB.NET to .NET Core 8 by leveraging AI as a force multiplier, and achieving a remarkable 60% improvement in application performance and enhancing overall system architecture.
- Established a robust CI/CD pipeline within the existing codebase, transitioning the team's deployment process from manual to automated, thereby reducing deployment risks by approximately 80%.

First National Financial LP

Senior Application Developer

October 2024 - April 2025

Toronto, ON, Canada

- Achieved a 30% performance boost by migrating legacy VB6 applications to .NET 8, optimizing code, and resolving bugs using C#, enhancing overall system efficiency.
- Redesigned software architecture for a new business line by implementing microservices and RESTful APIs, utilizing C# and Blazor to meet evolving user requirements and improve scalability.
- Elevated the functionality and reliability of Blazor applications by developing comprehensive unit and integration tests, collaborating with DevOps to establish a CI/CD pipeline, and ensuring quality standards were met with QA teams.

Aza

Senior Software Developer

April 2023 - March 2024

Lagos, Nigeria

- Architected and implemented secure and robust APIs using C#, .NET Core, and Azure, significantly enhancing system performance and scalability while ensuring seamless integration with payment gateways and third-party services.
- Achieved a 40% reduction in deployment time by migrating Aza's codebase to Azure, leveraging Docker for containerization and automating build processes with CI/CD, all while applying Agile methodologies and full-stack development practices.
- Boosted application reliability by implementing end-to-end tests and optimizing database performance through REST API, Entity Framework Core, LINQ, and SQL Server, ensuring a robust infrastructure on Azure.

Atto (formerly DirectID)

Software Developer

November 2021 - November 2022

Edinburgh, Scotland

- Enhanced Atto's microservices architecture, resulting in a 70% performance boost, by designing and developing robust APIs and services using C# and .NET 6, while integrating with third-party financial services and applying Agile methodologies.
- Achieved a 100% customer onboarding and retention rate by crafting user-centric web applications with React and JavaScript, ensuring a seamless experience through clean design and intuitive interfaces.
- Elevated code quality and performance across all Atto products by implementing Domain-Driven Design (DDD) principles, conducting thorough code reviews, and writing comprehensive unit and integration tests.

Decagon**July 2020 - August 2022***Software Developer**Austin, TX, USA*

- Enhanced application performance for diverse clients by architecting secure and scalable REST applications utilizing Monolithic and Microservices backend designs, leveraging C#, Blazor, React.js, Angular, Vue.js, MSSQL, and MongoDB, resulting in a 30% improvement in user satisfaction.
- Achieved a remarkable 80% reduction in release time through the automation of software builds and release processes with Git, GitHub actions, Azure DevOps, Docker, and Kubernetes, while optimizing CI/CD pipelines to align with project goals and development life cycles.
- Elevated team performance by leading and mentoring .NET developers within Agile frameworks, focusing on Domain-Driven Design (DDD) principles, conducting thorough code reviews, resolving critical bugs, and implementing comprehensive unit testing with XUnit, MSTest, and NUnit.

Fresible**November 2016 - December 2017***Frontend Developer**Lagos, Nigeria*

- Elevated client onboarding and retention rates by 55% by utilizing Angular and AWS to develop user-friendly applications, integrating C#, ASP.NET MVC, React, and Vue.js for versatile frontend solutions.
- Achieved 100% data safety and protection through SSRS scripting reports with SQL Server, ensuring data integrity and troubleshooting efficiency while leveraging Terraform for infrastructure management.
- Streamlined end-to-end development processes for SaaS and web applications by integrating APIs and employing HTML5, Web API, and Angular, significantly enhancing application performance and user interface design in serverless environments

EDUCATION

Ambrose Alli University*Master's, Computer Science***SKILLS**

Skills: C#, .NET Core, .NET, AI-DLC, Cursor, Claude Code, Co-Pilot, Git, GitLab, GitHub, SQL Server, Kubernetes, Azure DevOps, Hangfire, CI/CD, Microservices, HTML/CSS, RabbitMQ, JSON, Docker, Kubernetes, Microsoft Azure, MongoDB, AWS, ASP.NET Core MVC, Blazor, REST API, JavaScript, TypeScript, React.js, Angular, Vue.js, Jenkins, Redis, PostgreSQL, Postman, Entity Framework Core

Languages: English, French
